

Capstone Project Assignment

Objective

Design and present an AI-based solution to a real-world problem by applying concepts learned throughout the course.

Problem Statement

Choose a practical problem such as student attendance, waste management, healthcare assistance, smart farming, or customer support.

Requirements

Define the problem, target users, objectives, AI techniques, data required, tools, expected output, limitations, and future improvements.

Suggested Tools

ChatGPT, Google Colab, Python, Canva, PowerPoint, Excel, and any free AI tools relevant to your solution.

Project Structure

1. Title
2. Introduction
3. Problem Statement
4. Objectives
5. Proposed AI Solution
6. Methodology
7. Tools Used
8. Expected Results
9. Challenges
10. Future Scope
11. Conclusion
12. References

Sample Project

Title: AI Student Attendance System. The system uses face recognition or QR codes to automate attendance, reduce manual work, improve accuracy, and generate reports for teachers.

Conclusion

The capstone demonstrates how AI can solve practical problems efficiently while improving productivity and decision-making.
